# CHETAN MURTEPPANAVAR

Software Engineer – Java / Spring Boot Backend Development

Hyderabad, India | 7624814060 | chetan.b.murteppanavar@gmail.com | Open to Hybrid | Open to Relocate

## PROFESSIONAL SUMMARY

Backend Engineer with 3+ years of experience designing scalable ERP scheduling systems and asynchronous data pipelines. Expert in Java, Spring Boot, AWS, and Docker. Automated scheduling for 1,000+ production orders, reducing manual effort by 60%. Proficient in container security, SBOM generation, and AI-assisted development workflows.

## TECHNICAL SKILLS

**Languages:** Java (Core Java), SQL
**Frameworks**: Spring Boot, Spring MVC, Spring Data JPA, Hibernate
**APIs & Integration:** RESTful APIs, S3-based async pipelines
**Databases:** Microsoft SQL Server, PostgreSQL
**Cloud & DevOps:** AWS (S3, ECS, ECR), Docker, GitLab CI/CD
**Security & Compliance:** Container vulnerability scanning (Trivy), SBOM generation (CycloneDX)
**AI-Assisted Development:** Kiro (spec-driven development), AI-augmented code review & defect triage
**Tools:** Git, GitLab, Gradle, Maven, Eclipse, Postman

## PROFESSIONAL EXPERIENCE

**Software Engineer - Infor (India) Pvt. Ltd** **Apr 2022 - Present**

- **ERP Scheduler Application | Jun 2024 - Present | 100% uptime maintained**
- Designed and built backend scheduling algorithms in **Java/Spring Boot** to automate allocation for 1,000+ Production Orders (POs), reducing manual planning effort by ~60% and replacing a multi-step manual ERP workflow.
- Implemented core business logic for resource allocation, item-availability checks, batching rules, and buffer-time optimization to drive fully automated PO sequencing, increasing manufacturing throughput by 30%.
- Developed and exposed **REST APIs** to connect the scheduler with frontend and external systems, enabling 99.9% uptime for data exchange across the application stack.
- Architected a decoupled, **S3-based data pipeline**, reducing data retrieval latency by 20% by replacing direct database calls with CSV snapshots processed via S3.
- Built and maintained a multi-stage **GitLab CI/CD** pipeline, reducing container deployment time by 25% through automated build, ECR publishing, and vulnerability scanning.
- Designed an **AI-integrated maintenance workflow using Kiro** for a multi-codebase product (Java Engine, Angular UI, LN 4GL), standardizing the defect lifecycle across 3 technology stacks and reducing triage time by ~30%.
- Defined technology-specific coding standards and quality gates for the Java scheduling engine, reducing code review cycle time by 15% across the 4-member dev team.
- Partnered with a cross-functional team of 1 QA and 3 Business Analysts, alongside a 4-member dev team, to analyse requirements, triage production issues, and validate fixes within two-week **Agile** sprint cycles.
- Triaged and resolved 3-4 production issues per sprint through code reviews and performance tuning, maintaining 98% system responsiveness and code quality.
- **M3 BE / M3 Output Management | Apr 2022 - Jun 2024 | 100% project delivery rate**
- Engineered Infor M3 Business Engine workflows to transform enterprise stream data into schema-compliant XML formats, improving reporting speed by 15% for downstream systems.
- Built 50+ configurable document templates using Infor Document Management (IDM) to standardize ERP output generation and reduce manual formatting time by 20%.
- Customized 20+ XML-based output documents to meet business-specific reporting requirements, reducing document generation errors by 10%.

## EDUCATION

**KLS Gogte Institute of Technology (GIT), Belagavi | GPA: 9.11** **2022**
Bachelor of Engineering (B.E.), Electronics and Communication Engineering

## LANGUAGES

English, Hindi, Kannada
